

## ProSystem fx Engagement Add-in Update (Version 5.0 and 5.5)

### Description

The digital signature for ProSystem fx Engagement that is installed with v. 5.0 and 5.5 will expire on June 12, 2009. The expiration of these digital signatures will not cause any functionality loss within the Engagement application. However, users may experience macro security errors when opening a Trial Balance, TB Report, Microsoft Word and Excel workpapers from within Engagement. Also, for v. 5.5 the ribbon will no longer be active. Installing these updated digital signatures will prevent these errors from occurring.

This ProSystem fx Engagement Update includes the Engagement Add-in replacement files for Engagement version 5.0 and 5.5. Do not download this update if you have an earlier or later version of Engagement.

This download will provide a new epace.dot, epace.xla, and supporting files that include an updated digital signature file. Before the updated add-in files are installed, the current user's normal.dot and epace.xla should be backed up by the user. Upon login, after running the update, the updated epace.xla and epace.dot will be copied into the proper location and the new digital signature will be added to the Microsoft Word and Excel applications.

**Note:** For v. 5.0 Customers, it is recommended to install the [ProSystem fx Engagement v. 5.0 Update](#) before installing the Add-in Update.

### How to install:

1. Close ProSystem fx Engagement and Microsoft Office before running this update.
2. **Download** this self-extracting file.
3. If you are installing on a machine with Microsoft Windows Vista or Server 2008, download and run the **PfxUpdateDigitalSignature.exe** installation package. A setup file will be self-executed.
4. Follow a few easy steps to finish the update.
5. Reboot your computer after the update is finished.
