

Welcome to CCH Axcess™ Document 2019-1.0

This bulletin provides important information about the 2019-1.0 release of Document. Please review this bulletin carefully. If you have any questions, additional information is available on CCH [Support Online](#).

New in this Release

Entity ID and Entity Name Now Display on the CCH® ProSystem fx® Scan Barcode

We have added the entity ID and entity name — up to 24 characters — to the Scan barcode. Now, when you see the routing slip in Scan, you can easily tell which client this file belongs to.

64-Bit Upgrade

CCH Axcess now runs as a 64-bit application, taking advantage of higher memory capacity in many computers. Sending files from Document to CCH® ProSystem fx® Engagement is now compatible with this change.

If you elected to run CCH Axcess in 32-bit mode to work around a PDF error when viewing invoices in CCH Axcess Practice, you can either stay on 32-bit mode or follow the steps to move to 64-bit mode and install Adobe® Reader® DC as outlined in the Knowledge Base article <https://support.cch.com/kb/solution/000105646/000105646>.

Known/Resolved Issues

We have resolved an issue in which files weren't deleted from local storage.

We have resolved an issue in which Document was timing out when a file was open for direct edit.

If you were using Scan, the Entity ID and Entity Name are now displaying correctly on the barcode.
