

# ProSystem *fx* Document

## Welcome to ProSystem *fx* Document Release 2013-5.0

This bulletin provides important information about the 2013-5.0 release of ProSystem *fx* Document. Please review this bulletin carefully. If you have any questions, contact Customer Support at 1-800-PFX-9998 (1-800-739-9998), Option 6. Additional information is available on CCH Support Online.

## New in this Release

---

### Performance and Scalability Improvements

As part of our ongoing commitment to providing high-performing, scalable solutions, Wolters Kluwer, CCH routinely performs code analysis and database analysis to identify areas of improvement. This process allows us to reduce system errors, slow downs, crashes or other problems. Internal database scaling tools have been created to help balance the load between databases.

### Security Improvements

As part of Wolters Kluwer, CCH's ongoing commitment to the security of your customer data, we perform regular security assessments to identify and resolve any potential security risks.

## Technical Corrections

---

### Printing Web Pages to Document PDF Converter

Fonts are now embedded into PDFs to ensure that they display and print as expected when Web pages are printed to Document's PDF converter.

### Advanced Search Using Project ID

The Project ID search criteria has been removed from advanced search in this release.

## Known Issue

---

### File Remains Checked-out When Opened Using the Excel 2010 Plug-in

Files checked out and opened using the Excel 2010 plug-in do not check in as expected when Excel is closed. These files must be checked in manually by right-clicking the file in Document and then selecting **Check-in**. As a workaround, you can successfully check in files with the Excel plug-in by closing the workbook and not the Excel application. Files opened for Direct Edit or checked out directly from Document do not exhibit this behavior and are successfully checked in when Excel is closed.
