

# CCH Axxess Workstream

## Welcome to CCH Axxess Workstream 2019-3.4

This bulletin provides important information about the 2019-3.4 release of Workstream. Review this bulletin carefully. If you have any questions, additional information is available on CCH [Support Online](#).

## New in this Release

---

### Override Form Due Date Permission

A new permission that prevents or grants the ability to override a form due date is now available. For information about this new permission, as well as other Workstream permissions, see [Security Group Functional Rights Explained](#) in the Administration Manager Help. See [Managing Security Group Functional Rights](#), also in the Administration Help, for instructions on updating staff member permissions.

## Technical Corrections

---

### Workstep Assignments Based on Roles Not Updated on Roll Forward

Workstep assignments now update to the corresponding role assignment when projects are rolled forward.

### Workstep Assignments Removed When Creating Projects

Workstep assignments now are added when you create projects.

### Error When Opening a View

The following error no longer displays when opening some views in Workstream: "There was an error deserializing the object of type System.Object. The byte 0x19 is not valid at this location. Line 1 position 391."

### Staff Project Budget to Actual

The Staff Project Budget to Actual now shows the workstep budget hours from the budgeting tab if there is only one assignee on that workstep. If there is more than one assignee on the assignments tab, it will show the budget hours from the assignments tab.
