

ProSystem *fx*® Document

Class and Subclass Update for Version 3.3

Class and Subclass Update

This update addresses the issue that when editing a document and changing the Class, the Subclass selected may not initially save correctly.

NOTE: The installation path referenced below may vary.

1. Login to the Document Server.
2. Unzip the "Class and Subclass Update.zip" and extract the AddNormal.js and DocumentGroupEdit.aspx files.
3. For USA and Australia: Rename the existing C:\Program Files\ProSystem fx Document\Document\Document\DocumentGroupEdit.aspx and C:\Program Files\ProSystem fx Document\Document\Scripts\AddNormal.js files.
 - For Canada: Rename the existing C:\Program Files\CCH Document\Document\Document\DocumentGroupEdit.aspx and C:\Program Files\CCH Document\Document\Scripts\AddNormal.js files.
4. For USA and Australia: Copy the new DocumentGroupEdit.aspx file to **C:\ProSystem fx Document\Document\Document** directory.
 - For Canada: Copy the new DocumentGroupEdit.aspx file to **C:\Program Files\CCH Document\Document\Document** directory.
5. For USA and Australia: Copy the new AddNormal.js file to **C:\Program Files\ProSystem fx Document\Document\Scripts** directory.
 - For Canada: Copy the new AddNormal.js file to **C:\Program Files\CCH Document\Document\Scripts** directory.
6. Log all users out of the Document System and restart IIS.
